

Enhanced Recovery Training Courses

Yeovil District Hospital (YDH) has a proven track record in Enhanced Recovery for both **colorectal** and **orthopaedic surgery**. Hospital stay for colorectal cancer patients undergoing laparoscopic resection has been reduced by roughly 50% with a concomitant reduction in related costs[^]. Our current median hospital stay following laparoscopic colorectal cancer resection is 5 days. Similar reductions in hospital stay for patients undergoing Hip and Knee replacement (current median stay 5 days) have illustrated the value of this system.

The Enhanced Recovery Team at YDH provide training courses aimed at helping other centres to get started with this programme. The team consists of surgeons, anaesthetists, theatre practitioners, nurse specialists, pain control specialists, nutritionists, and physiotherapists.

Once your ERP team is identified, send them to one of our 1-day multi-professional training days.
